From colour-accented temples, to the high profile dual lens look of fashion street wear, Solus brings sophistication and comfort to safety eyewear. The purity of the lens design gives the wearer a freedom of vision and at only 23g offers comfort never achieved before. The lens curve has been calculated to optimise the fitting, field of vision and coverage of the eyes.

3M™ Solus™ Spectacles are also available in a new blue lens with a light flash mirror coating to remove eye stress and fatigue often occurring in monochromatic (single colour) yellow lit environments. Perfect in work environments where there is strong glare from bright lighting (outdoor, semiconductor fabrication, photolithography and similar industries where there is medium to high levels of yellow incandescent/ fluorescent lamps, or high and low pressure sodium vapour lighting). The Flash Mirror coating will also help to reflect the glare for an extraordinary comfort for the eyes.

Lens colour	Product code	Frame	Lens	Coating	Filter
	71505-00001CP		PC - Clear	AS	UV
	71505-00002CP		PC - Clear	AS-AF	UV
